Installation Instructions & User Guide

Please leave these instructions
with the end user

Product Code: RS BIB C (D3)

Specifications

Inlet Water Temperature

60-65°C Recommended

Dynamic Water Pressure

Min: 0.2 bar

Max: 5.0 bar

Maximum Static Pressure: 10.0 bar

Inlet Connections

1/2" BSP

Tools You'll Need

Hexagonal Key

Crosshead
Screwdriver

Adjustable
Spanner

Long-Nosed
Pliers

Pipe Cutter

Drill

Pencil

Safety
Goggles

Prior to Installation

All products manufactured and supplied by Bristan are safe to use provided that they are installed, operated and receive regular maintenance in accordance with these instructions.

This product needs to be installed in accordance with, and meet the requirements of the Water Supply (Water Fittings) Regulations 1999 and current by-laws. For full Installation Requirements & Notes (IRN) please visit www.wras.co.uk/directory.

Isolation valves must be fitted to the inlet water supplies to ensure ease of future maintenance.

Before installing this product the water supply must be thoroughly flushed in order to remove any swarf, solder etc. Full access must be made available for future maintenance/servicing purposes.

If power tools are used do not forget to:

- Wear eye protection
- Unplug equipment after use

This product must not be modified in any way as this will invalidate the guarantee.

If in doubt, contact a registered plumber, your Local Water Authority or the Secretary of the Institute of Plumbing, address as follows:-

The Institute of Plumbing,
64 Station Lane,
Hornchurch,
Essex,
RM12 6NB, Tel: 01708 472791

x2

Installation

1

Create the rear access point in the back of the wall cavity.

IMPORTANT
Bib taps can also be fitted to X US C and BTE C. Please refer to those instructions if being used.

2

Identify the required position of the taps and prepare the water supply pipes.

Mark and drill holes. Finish the wall surface.

REMEMBER
Hot on the left, cold on the right!

3

Feed the tap bodies through the wall. Secure using a suitable washer and sealant (not supplied).

4

Connect the hot and cold water supplies to the threaded tails. We recommend using elbows (not supplied).

5

Turn on the water supply and check all joints and connections for leaks.

Spare Parts

To replace any spare parts for your tap, why not scan the QR Code or visit www.bristan.com and search for your product.

Operation

General Cleaning

Bristan products are made from premium materials, with hand polished, PVD, EPD or electroplated finishes.

Your tap should be regularly cleaned with warm water, a mild pH-neutral liquid soap, and polished with a soft cloth. Any residues from soap, toothpaste, shampoos and shower gels can cause blemishes if not rinsed off straight after use.

Household bleaches and cleaners contain harsh chemicals and may damage the surface finish. Avoid using abrasive cloths, scouring pads, scrub sponges, steel wool or anything similar.

Some surfaces such as nickel and pewter may be affected by the dye found in some cloths, so it is also important to avoid hanging cloths on spouts.

Troubleshooting		
Symptom	Cause	Remedy
No flow or low flow rate	Partially closed isolation valve.	Open isolation valve.
	Head of water is below the minimum distance required.	Refer to specification for minimum distance required.
	Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes.	Do not use other water outlets when using the taps.
	Airlock or partial blockage in the supply pipework.	Flush through pipework to ensure removal of debris and any airlocks.
Water dripping from taps	This is normal for a short time after using the taps.	This is caused by residual water tension, the build up of water in the tap body.
	If water continues to drip, possibly due to the ceramic disc valves	Remove valves and clean, refer to 'Maintenance' section before starting any maintenance.
Taps do not turn on	Closed isolation valve.	Open isolation valve.
	Mains water supply turned off.	Turn on mains water supply.

Maintenance - Replacing Valves

1

Undo the grub screws to remove the handles.

2

Unscrew the shrouds. Use a suitable spanner to remove the valves.

3

Check any seals and O-rings for damage.

Visit www.bristan.com and search for your product to replace valves if necessary.

4

Reverse the steps to replace the valves and handles.

IMPORTANT Isolate the water supply before starting!

Maintenance - Clean/Replace Outlet

1

Using long-nosed pliers, unscrew gently to remove the outlet.

2

Check for damage. Soak using a suitable solution to de-scale.

Use a WRAS approved sealant to replace the outlet back into the tap body.

IMPORTANT Isolate the water supply before starting!

Notes

Please use this space for any notes you or your installer may have regarding the installation/plumbing of this product.
